DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claim(s) 1-3; drawn to sugar alcohol composition, classified in class 426, subclass 548.

Group II, claim(s) 4-12, 13-15 and 16-20; drawn to aerated egg product containing grain powder, classified in class 426, subclass 564.

Inventions in Groups I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product, and the species are patentably distinct (MPEP § 806.05(j)).

In the instant case, the intermediate product is deemed to be useful as a coating agent for the pharmaceutical industry and inventions in group II are egg products like meringue, soufflé or baked custard, etc., made by the addition of the product of Group I to the other ingredients to make the product of Group II.

The inventions are deemed patentably distinct because the intermediate product can be used to make a completely different final product and there is nothing on this record to show them to be obvious variants.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1761

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
